If you want to edit and fix your images on a Mac, you can read some starter articles on How to Edit Your Images. Adobe Photoshop is a powerful photo editing software package. It is primarily for creating high-quality prints (posters, etc.), but it is equally useful for creating web images, designing graphics, designing websites, and for retouching photographs. The program has a complex, highly detailed user interface that allows for the creation of impressive work. You'll need to know the keyboard shortcuts, the menus, and where to find things. Learn the basic Photoshop commands and you'll have a lot of fun creating images. You'll also get to see the basics of image editing under macOS, so it's a good time to learn. Using the Help menu will put you right in the center of the program. Check it out when you need to see what something does, or how something works. There's an excellent list of Photoshop keyboard shortcuts and other links to help you learn the program. Read on for more information. Getting Started First, read the Photoshop document that explains the interface and keyboard shortcuts. Then, open an image of your choice. It is a good idea to save it so you can come back to it later. To open an image, click Open and select the image or folder of images that contains the images you want to work on. It goes something like this. `' CommandArgument=" />` Now my problem is that I want to get the value of each checkbox that is inside the list item. I hope this question is clear enough. Please let me know if you need any more explanation. Thanks. A: I think you are using
